Increase your drilling productivity with Robit Extreme Carbide

Robit® Extreme Carbides have been designed to provide the best performance and lifetime in hard and abrasive rock conditions. Extreme Carbide has hard outer layer and an optimized core with improved resistance to breakages.

- Increased bit lifetime up to 30% in hard and abrasive rock conditions
- Carbides will stay sharper for longer time providing efficient drilling performance
 - Faster rate of penetration (ROP)
 - Less grinding needed especially at the start of the bit lifetime
 - Sharper bit will save your drill string => less recoil energy to rods and shanks

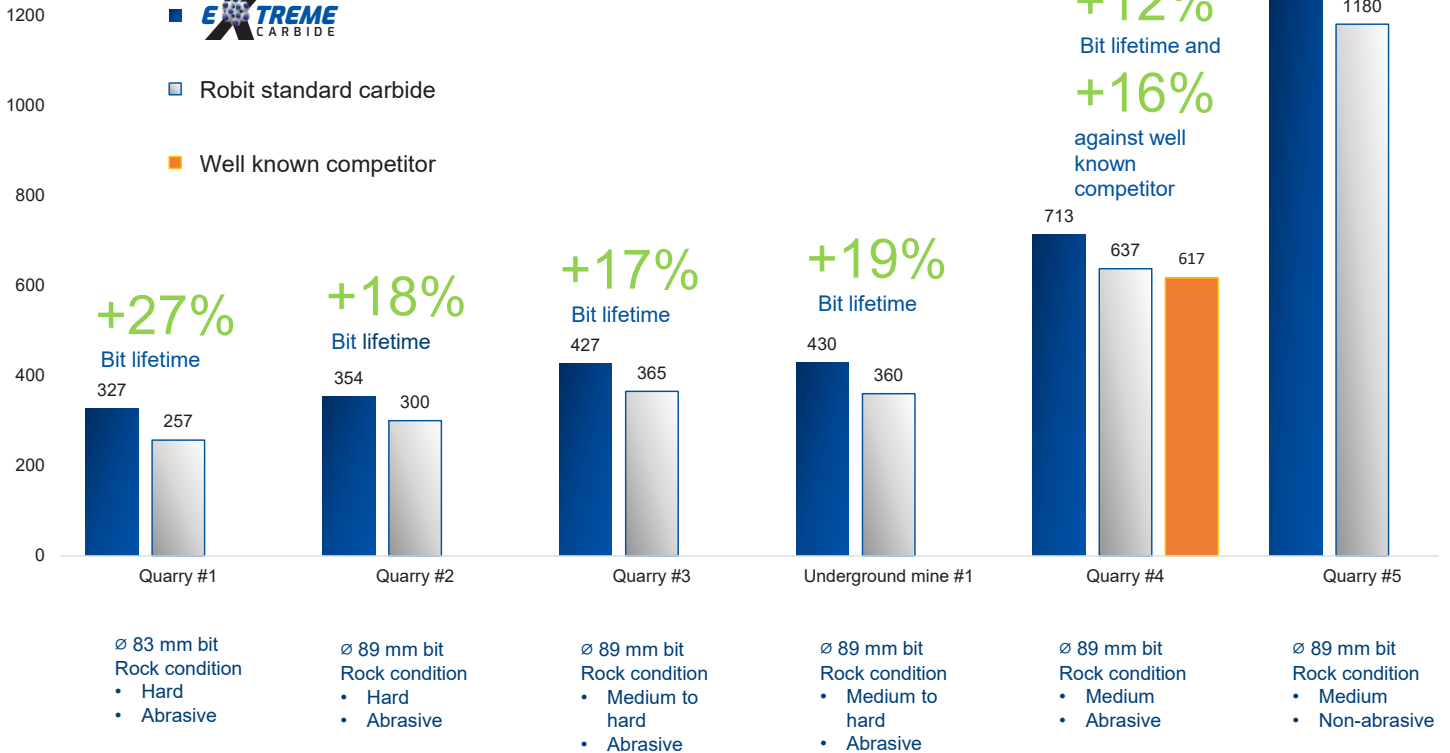

Robit recommends to regrind the Extreme carbides for optimal drilling performance once the outer hard layer has worn off.

Innovative Design of the Extreme Carbide

Proven performance of the Extreme Carbide
